- C Competence and comprehension
- D Voluntariness

CORRECT

Q-271

SnleNotes.com

Nurse was providing research study for 200 people, the research is answered by 120 people only, calculate how many people that shared in study in percentage ?

- A 0.2
- B 0.4
- C 0.8
- D 0.6**

CORRECT

Q-272

SnleNotes.com

In the hospital digital dashboard, what types of data displayed ?

- A Staffing
- B Financial
- C Performance**
- D Knowledge–based

CORRECT

Q-273

SnleNotes.com

which of the following is the most appropriate action for a head nurse starting at a new hospital ?

- A Make immediate change at the unit
- B Plan and coordinate new strategies**
- C Assess unit activities for at least three months
- D Ask about the previous head nurse managerial style

CORRECT

Q-274

SnleNotes.com

During the assessment phase of a preoperative interview, the patient reports feeling nervous. The patient conveys to the nurse that a parent died in surgery due to malignant hyperthermia ti whom would this information be most important ?

- A PACU NURSE
- B SCRUB NURSE
- C ANAESTHESIA TEAM**
- D CHARGE NURSE

CORRECT

Q-275

SnleNotes.com

A patient with a history of atrial fibrillation has an order for 25 milligrams of drug (X), the available supply/dose is 0.25 milligrams. Which of the following doses in correct ?

- A Dispense two tablets to the patient
- B Administer one tablet twice daily
- C Dispense one half tablet to the patient
- D Return tablets to the pharmacy and re-order**

CORRECT

Q-276

SnleNotes.com

The nurse begins a morning shift with the following see the doctor in the waiting room (see table) 1. A first time mother who delivered two days ago and is having Difficulties breastfeeding 2. A60 year-old man who has a history of deep vein Thrombosis and is taking daily heparin 3. A76 year-old women who was hospitalized three days Previously with pneumonia 4. A 56-year-old man who has used all his diuretic pills Coughing up sputum. Which patient should be seen first ?

- A One
- B Two
- C Three
- D Four**

CORRECT

Q-277

SnleNotes.com

A patient with poor prognosis has a DNR order, but one of three children disagrees. What should the nurse do?

- A provide care and comfort
- B provide palliative care
- C Discuss with family
- D regarding DNR and patient needs**

CORRECT

Q-278

SnleNotes.com

A patient fell in the bathroom and fractured the left leg. Which documentation method should the nurse use to communicate this information to the next shift?

- A Kardex record
- B Assignment record
- C Shift report**
- D Incident report

CORRECT

Q-279

SnleNotes.com

The nurse is monitoring a client with malnutrition who is receiving total parenteral nutrition (TPN). Which action would the nurse take when obtaining a finger-stick glucose reading of 425 mg/dL (23.7 mmol/L)?

- A Stop the TPN.
- B Administer insulin.
- C **Notify the primary health care provider.**
- D Decrease the flow rate of the TPN. Nutrition/Malabsorption Problems

CORRECT

Q-280

SnleNotes.com

An echocardiogram, chest x-ray (CXR), and computed axial tomography (CAT) scan are prescribed for a client being evaluated for possible coronary artery disease who has been demonstrating activity intolerance. In which order would the nurse plan to schedule the procedures to meet the needs of this client safely and effectively?

- A CAT scan and CXR in the morning and echocardiogram on the following morning
- B CXR and echocardiogram together in the morning and CAT scan in the afternoon of the same day
- C Echocardiogram in the morning and CXR and CAT scans together in the afternoon of the same day
- D **CXR in the morning, echocardiogram in the afternoon, and CAT scan in the morning of the following day**

CORRECT

Q-281

SnleNotes.com

A client admitted to the nursing unit with a closed head injury 6 hours ago has begun to vomit and reports being dizzy and having a headache. Based on these data, which is the most important nursing action?

- A Administering a prescribed antiemetic
- B Having the client rate the headache pain on a scale of 1 to 10
- C **Notifying the primary health care provider of the client's condition**
- D Reminding the client to use the call bell when needing help to the bathroom

CORRECT

Q-282

SnleNotes.com

The nurse manager reviewing the purposes for applying restraints to a client determines that further education is necessary when a nursing staff member makes which statement supporting the use of a restraint?

- A "It limits movement of a limb during a painful procedure."
- B "It prevents the violent client from injuring self and others."
- C **"At night it keeps the client in bed instead of wandering about."**

CORRECT

Q-290

SnleNotes.com

The clinic nurse wants to develop a teaching program for clients with a diagnosis of diabetes mellitus. Which strategy would the nurse initiate first in order to best meet the clients' needs?

- A Assess the clients' functional abilities.**
- B Ensure that insurance will pay for participation in the program.
- C Discuss the focus of the program with the multidisciplinary team.
- D Include everyone who comes into the clinic in the teaching sessions.

CORRECT

Q-291

SnleNotes.com

The nurse notes that a postoperative client has not been obtaining relief from pain with the prescribed opioid analgesics when a particular licensed coworker is assigned to the client. Which action is most appropriate for the nurse to implement initially?

- A Reassign the coworker to the care of clients not receiving opioids.
- B Notify the primary health care provider that the client needs an increase in opioid dosage.
- C Review the client's medication administration record immediately and discuss the observations with the nursing supervisor.**
- D Confront the coworker with the information about the client having pain control problems and ask if the coworker is using the opioids personally.

CORRECT

Q-292

SnleNotes.com

In which situation is the nurse manager utilizing an autocratic leadership style?

- A The nurse manager provides the solution for a unit problem.**
- B The nurse manager allows the staff to solve their own unit problem.
- C The nurse manager proposes several alternatives and has the unit staff vote on the best proposal.
- D The nurse manager arranges for a staff meeting where all unit employees can share proposals to solve a problem.

CORRECT

Q-293

SnleNotes.com

Which clinical situation should justifiably be viewed as an assault?

- A The nurse threatens to apply restraints to a client who is exhibiting aggressive behavior.**
- B The client requests a medical discharge, but the nurse physically forces the client to stay.
- C The charge nurse sends an email to a staff member that includes a poor performance evaluation about another person.
- D The nurse overhears the primary health care provider making derogatory remarks to the client about the nurse's level of competency.

CORRECT

Q-294

SnleNotes.com

After finding a client sitting on the floor, the nurse ensures the client's safety, completes an incident report, and notifies the primary health care provider of the incident. Which action would the nurse implement next?

- A Staple the incident report in the client's medical record.
- B Document the client events and follow-up nursing actions.**
- C Provide a copy of the incident report to the provider and family.
- D Document that a copy of the report was sent to risk management.

CORRECT

Q-295

SnleNotes.com

A client had a colon resection made necessary by a cancer diagnosis. A nasogastric tube was in place when a regular diet was brought to the client's room. The client did not want to eat solid food and asked that the primary health care provider be called. The nurse insisted that the solid food was the correct diet. The client ate and subsequently required additional surgery as a result of complications. The determination of negligence is based on which premise in this situation?

- A The nurse's persistence
- B A duty existed and it was breached**
- C Not notifying the primary health care provider
- D The dietary department sending the wrong food

CORRECT

Q-296

SnleNotes.com

A client asks the nurse how to become an organ donor. Which information would the nurse include in the discussion?

- A The client can donate by written consent.**
- B A family member must witness the consent.
- C The donor must be older than 21 years of age.
- D A family member must be present when a client consents to organ donation.

CORRECT

Q-297

SnleNotes.com

A clinical nurse manager conducts an educational session for the staff nurses about case management. Which premise, if stated by one of the staff nurses, regarding case management, would necessitate a need for further teaching?

- A Manages client care by managing the client care environment
- B Maximizes hospital revenues while providing for optimal client care
- C Represents a primary health prevention focus managed by a single case manager
- D Is designed to promote appropriate use of hospital personnel and material resources

CORRECT

Q-298

SnleNotes.com

The nurse manager is reviewing the critical paths of the clients on the nursing unit. The nurse manager collaborates with each nurse assigned to the clients and performs a variance analysis. Which finding would indicate the need for further assessment and analysis?

- A A client is performing his or her own colostomy care.
- B A 1-day postoperative client has a temperature of 98.8° F (37.1°
- C A 2-day post-abdominal hysterectomy client has drainage noted from the incision.
- D A client newly diagnosed with diabetes mellitus is preparing his or her own insulin for injection.

CORRECT

Q-299

SnleNotes.com

Which client would the nurse safely assign to the assistive personnel (AP)?

- A A client requiring dressing changes
- B A client requiring frequent ambulation
- C A client on a bowel management program requiring rectal suppositories

- A **"How can I assist you with ways to remember your baby?"**
- B "You seem upset. Do you think a tranquilizer would help?"
- C "I feel so bad. I don't understand why this happened either."
- D "I can allow another 15 minutes together for you to grieve."

CORRECT

Q-337

SnleNotes.com

Shortly after a client dies, the nurse asks the family about funeral arrangements. When the family refuses to discuss the issue, which intervention by the nurse is appropriate for their stage of grief at this time?

- A Displaying acceptance of the family's issues
- B Providing information about funerals in general
- C Probing for information about funeral arrangements
- D **Asking the family if they would like time alone with the client**

CORRECT

Q-338

SnleNotes.com

The nursing student is listening to a lecture on correcting errors in a written narrative on a medical record. Which statement by the nursing student indicates that the teaching has been effective?

- A "The correct procedure is to document the correction as a late entry."
- B **"The correct procedure is to draw a line through the error and initial and date it."**
- C "The correct procedure is to remove the error in a manner approved by the facility."
- D "The correct procedure is to cover the error completely using a permanent marker."

CORRECT

Q-339

SnleNotes.com

When responding to the call bell, the nurse finds the client lying on the floor beside the bed. After a thorough assessment and appropriate care, the nurse completes an incident report. How would the incident be described in the report?

- A The client fell out of bed and was found on the floor.
- B The client fell while climbing over the bed's side rails.
- C The client was found lying on the floor beside the bed.**
- D The client was restless and fell while getting out of bed.

CORRECT

Q-340

SnleNotes.com

The nurse is preparing a client for electroconvulsive therapy (ECT). After the client signs the consent form for the procedure, a family member states, "I don't think that this ECT will be helpful, especially since it makes people's memory worse." What form of communication would the nurse implement to address the family member's concern?

- A Ask other family members and the client if they think that ECT makes people worse.
- B Involve the family member in a dialog to ascertain how the family member arrived at this conclusion.**
- C Immediately reassure the client and family that ECT will help and that the memory loss is only temporary.
- D Reinforce with the client and the family member that depression causes more memory impairment than ECT.

CORRECT

Q-341

SnleNotes.com

A Muslim female client has been stabilized following an assault in the parking lot of a local restaurant. The nurse manager is making assignments for the oncoming shift. Which action by the nurse manager is the most appropriate to ensure the client's comfort?

- A Assign the best male nurse to the client.
- B Assign the client a female nurse for every shift.**
- C Allow the client to pick which nurses she would like to care for her.
- D Remove all of the client's clothing each shift to perform a skin assessment. Ethnicity

CORRECT

Q-342

SnleNotes.com

The nurse calls the primary health care provider (PHCP) to express concerns about a chemotherapeutic medication dose prescribed by the PHCP being too high. The PHCP office staff informs the nurse that the PHCP has left town and will not be available for several days. What action would the nurse take next to assure client safety?

- A Reschedule the client's chemotherapy until the next week.
- B Withhold giving the medication until the PHCP's partner makes rounds.
- C Telephone the answering service and confer with the on-call PHCP.**
- D Confer with the pharmacist, who agrees the dose is too high, and then reduces the dose accordingly.

CORRECT

Q-343

SnleNotes.com

The nurse working in a long-term care setting attended a workshop on creating a restraint-free environment for the residents. When several coworkers firmly resist change, stating that their current methods are satisfactory, which action would aid the nurse in being effective in facilitating change?

- A Pointing out to coworkers the various mistakes that they are presently making in adhering to outdated restraint procedures
- B Informing the nursing supervisor that current restraint policies must be changed and requesting that all staff be required to comply
- C Writing a new restraint policy over the weekend and distributing it to coworkers for immediate implementation on Monday morning
- D Asking coworkers to help gather data comparing the facility's restraint procedures and outcomes with those of others using revised procedures**

CORRECT

Q-344

SnleNotes.com

The nurse obtains a finger-stick glucose of 400 mg/dL (22.85 mmol/L) for a client who receives total parenteral nutrition (TPN). Which follow-up intervention would the nurse implement?

- A Discontinue the current TPN infusion.
- B Decrease the infusion rate of the TPN.
- C Replace TPN with 5% dextrose solution.
- D Confer with the primary health care provider for glucose control. Nutrition/Malabsorption Problems**

CORRECT

Q-345

SnleNotes.com

The nurse fails to recognize that a client's vital signs have deteriorated over the past 4 hours after surgery. Later, the client requires emergency surgery. Which legal consequence does the nurse potentially face because of a failure to act?

- | | | |
|----------|---------------|----------------|
| A | Tort | CORRECT |
| B | Statutory law | |
| C | Common law | |
| D | Misdemeanor | |

Q-346

SnleNotes.com

A registered nurse (RN) is supervising a licensed practical nurse (LPN) providing care to a client with end-stage heart failure. The client is withdrawn, is reluctant to talk, and shows little interest in participating in hygienic care or activities. Which statement by the LPN to the client indicates that the LPN needs further teaching in the use of therapeutic communication skills?

- | | | |
|----------|--|----------------|
| A | "You are very quiet today." | |
| B | "What are you feeling right now?" | |
| C | "Why don't you feel like getting up?" | CORRECT |
| D | "Tell me more about your difficulty with sleeping at night." | |

Q-347

SnleNotes.com

The nurse is observing an assistive personnel (AP) care for an older client who had surgery (insertion of a prosthesis) following a hip fracture 4 days ago. To prevent client injury, the nurse would intervene in the care when which action is performed by the AP?

- | | | |
|----------|---|----------------|
| A | Elevates the head of bed 30 degrees | |
| B | Assists the client in inserting dentures | |
| C | Obtains a bedside commode to keep in the room | CORRECT |
| D | Places pillows between the legs when turning the client | |

Q-348

SnleNotes.com

The nurse in a rehabilitation center is planning the client assignments for the day. Which client has needs that can be most safely met by the assistive personnel (AP)?

- | | | |
|----------|---|----------------|
| A | A client on strict bed rest for whom a 24-hour urine specimen is being collected | CORRECT |
| B | A client scheduled for transfer to the hospital for coronary artery bypass surgery | |
| C | A client scheduled for transfer to the hospital for an invasive diagnostic procedure | |
| D | A client who is going through rehabilitation after undergoing a below-the-knee amputation (BKA) | |

Q-349

SnleNotes.com

In preparing a plan of care, which is the priority intervention to address the needs of a client recently assaulted sexually?

- | | | |
|----------|---|----------------|
| A | Providing instructions for medical follow-up | |
| B | Obtaining appropriate counseling for the victim | |
| C | Providing anticipatory guidance for police investigations, medical questions, and court proceedings | |
| D | Exploring safety concerns by obtaining permission to notify significant others who can provide shelter | CORRECT |

Q-350

SnleNotes.com

The nurse providing care to a client with a leg fracture ensures that which intervention is implemented first before the fracture is reduced in the casting room?

- | | | |
|----------|--|----------------|
| A | Obtaining an anesthesia consent | |
| B | Administering an opioid analgesic | |
| C | Notifying the operating room staff | |
| D | Obtaining an informed consent for treatment | CORRECT |

Q-351

SnleNotes.com

A client just diagnosed with acute kidney injury has a serum potassium level of 6.1 mEq/L (6.1 mmol/L). Which action should the nurse take immediately?

- A Check the sodium level.
- B Call the primary health care provider.**
- C Encourage an extra 500 mL of fluid intake.
- D Teach the client about foods low in potassium. and Chronic Kidney Disease

CORRECT

Q-352

SnleNotes.com

The nurse has received the client assignment for the day. Which client would the nurse care for first?

- A A client with a wound infection who has a temperature of 100.4° F (38° C)
- B A client with a deep vein thrombosis who reports bleeding gums when brushing the teeth
- C A client who had a right arm casted 12 hours ago who is complaining of numbness in the fingers**
- D A client with chronic obstructive pulmonary disease (COPD) who has a respiratory rate of 22 beats/min

CORRECT

Q-353

SnleNotes.com

Which client would the nurse delegate to the assistive personnel (AP)?

- A A client who needs teaching regarding the use of an incentive spirometer
- B A client who needs to have a urine specimen collected for a clean catch urine**
- C A client who needs reinforcement of a dressing covering an abdominal incision
- D A client who needs assessment of a newly identified area of pressure over the right hip

CORRECT

Q-354

SnleNotes.com

Call the physician and report the situation using SBAR format. The nurse is assessing a client with heart failure who is receiving home health care monitoring using electronic devices including scales, blood pressure monitoring, and structured questions to which the client responds daily on a touch-screen monitor. The nurse reviews data obtained within the last 3 days. The nurse calls the client to follow up. The nurse should ask the client which of the following first:

- A "How are you feeling today?"
- B "Are you having shortness of breath?"**
- C "Did you calibrate the scales before using them?"
- D "How much fluid did you drink during the last 24 hours?"

CORRECT

Q-355

SnleNotes.com

The parent of a 17-year-old boy, who is hospitalized for complications related to type I diabetes, requests to review the adolescent's medical record. The client reported receiving mental health counseling during the admission history, but did not want his parent to know. The nurse, who is uncertain of how to protect the adolescent's privacy and accommodate the parent's request, should consult:

- A The unit nurse manager.**
- B The primary care provider.
- C The organization's privacy officer.
- D The customer service representative.

CORRECT

Q-356

SnleNotes.com

The nurse in the emergency department is administering a prescription for 20 mg intravenous furosemide (Lasix) which is to be given immediately. The nurse scans the client's identification band and the medication barcode. The medication administration system does not verify that furosemide is prescribed for this client; however, the furosemide is prepared in the accurate unit dose for intravenous infusion. The nurse should do which of the following next?

- A Contact the pharmacist immediately to check the prescription and the barcode label for accuracy.**
- B Administer the medication now, knowing the medication is labeled and the client is identified.
- C Report the problem to the information technology team to have the barcode system recalibrated.
- D Ask another nurse to verify the medication and the client so the medication can be given now.

CORRECT

Q-357

SnleNotes.com

The nurse finds an unlicensed assistive personnel (UAP) massaging the reddened bony prominences of a client on bed rest. The nurse should:

- A Reinforce the UAP's use of this intervention over the bony prominences.
- B Explain that massage is effective because it improves blood flow to the area.
- C Inform the UAP that massage is even more effective when combined with lotion during the massage.
- D **Instruct the UAP that massage is contraindicated because it decreases blood flow to the area.**

CORRECT

Q-358

SnleNotes.com

The nurse manager on the orthopedic unit is reviewing a report that indicates that in the last month five clients were diagnosed with pressure ulcers. The nurse manager should:

- A Use benchmarking procedures to compare the findings with other nursing units in the hospital.
- B Ask the staff education department to conduct an educational session about preventing pressure ulcers.
- C **Institute a quality improvement plan that identifies contributing factors, proposes solutions, and sets improvement outcomes.**
- D Conduct a chart audit to determine which nurses on which shifts were giving nursing care to the clients with pressure ulcers.

CORRECT

Q-359

SnleNotes.com

The nurse is to administer an antibiotic to a client with burns now, but there is no medication in the client's medication box. What should the nurse do first?

- A Inform the unit's shift coordinator.
- B Contact the client's physician.
- C **Call the pharmacy department.**
- D Borrow the medication from another client.

CORRECT

Q-360

SnleNotes.com

The nurse is admitting a client with glaucoma. The client brings prescribed eyedrops from home and insists on using them in the hospital. The nurse should:

- A Allow the client to keep the eyedrops at the bedside and use as prescribed on the bottle.
- B Place the eyedrops in the hospital medication drawer and administer as labeled on the bottle.
- C **Explain to the client that the physician will write a prescription for the eyedrops to be used at the hospital.**
- D Ask the client's wife to assist the client in administering the eyedrops while the client is in the hospital.

CORRECT

Q-361

SnleNotes.com

The nurse is assigned to care for a client with an ocular prosthesis who is having surgery under a local anesthetic. Prior to surgery, the nurse should:

- A Maintain surgical asepsis when caring for the prosthesis.
- B **Leave the prosthesis in place.**
- C Cleanse the ocular prosthesis with full-strength hydrogen peroxide.
- D Instruct the client to cleanse the prosthesis daily.

CORRECT

Q-362

SnleNotes.com

After completing assessment rounds, which of the following should the nurse discuss with the physician first?

- A A client with cirrhosis who is depressed and has refused to eat for the past 2 days.
- B A client with stable vital signs that has been receiving IV cipro following a cholecystectomy for 1 day and has developed a rash on the chest and arms.
- C A client with pancreatitis whose family requests to speak with the physician regarding the treatment plan.
- D **A client with hepatitis whose pulse was 84 and regular and is now 118 and irregular.**

CORRECT

Q-363

SnleNotes.com

The nurse's assignment consists of the following four clients. From highest to lowest priority, in which order should the nurse assess the clients after receiving morning report?

- A The client with cirrhosis who became confused and disoriented during the night. **CORRECT**
- B The client who is 1 day postoperative following a cholecystectomy and has a t-tube inserted.
- C The client with acute pancreatitis who is requesting pain medication.
- D The client with hepatitis B who has questions about discharge instructions.

Q-364

SnleNotes.com

Which of the following children should the nurse identify as being more at risk for an episode of major depression?

- A A 16-year-old male, who has been struggling in school, making only Cs and Ds.
- B A 13-year-old female, who was upset over not being chosen as a cheerleader.
- C A 10-year-old male, who has never liked school and has few friends.
- D A 14-year-old, who recently moved to a new school after her parents' divorce. **CORRECT**

Q-365

SnleNotes.com

The primary health care provider prescribes carbamazapine extended release (Tegretol-XR) for a client with a cerebral palsy who also has a seizure disorder. The client has a gastrostomy feeding tube, and carbamazapine is on the hospital's "no crush" list. In order to administer the medication, the nurse should:

- A Cut the medication into four pieces that can be placed in the feeding tube.
- B Dissolve the medication in 30 mL of juice.
- C Ask the pharmacist for an oral suspension.
- D Contact the primary care provider to change the prescription. **CORRECT**

Q-366

SnleNotes.com

When making rounds on the pediatric neurology unit, the nurse manager notes that when giving IV medications many of the staff nurses are disconnecting the flush syringe first and then clamping the intermittent infusion device. The nurse is concerned that the nurses do not understand the benefits of positive pressure technique and turbulence flow flush in preventing clots. After discussing the problem with the staff educator, which intervention would be the most effective way to improve the nursing practice?

- A Create a poster presentation on the topic with a required post test.
- B Send a group email discussing the importance of clamping the device first.
- C Ask each nurse if they are aware that their practice is not current.
- D Post an evidence-based article on the unit. **CORRECT**

Q-367

SnleNotes.com

When the client is involuntarily committed to a hospital because he is assessed as being dangerous to himself or others, which of the following rights are lost?

- A The right to access healthcare.
- B The right to send and receive uncensored mail.
- C Freedom from seclusion and restraints. **CORRECT**
- D The right to leave the hospital against medical advice.

Q-368

SnleNotes.com

The nurse manager on a psychiatric unit is reviewing the outcomes of staff participation in an aggression management program. Evaluation of such a program would be based primarily on which of the following indicators?

- A Fewer client injuries during restraint procedures.
- B A reduction of complaints by clients' relatives.
- C Fewer staff injuries during restraint procedures.
- D A reduction in the total number of restraint procedures. **CORRECT**

Q-369

SnleNotes.com

The hospital is responding to a mass casualty disaster with adult and pediatric victims. After reallocating staff, the charge nurse on the pediatric floor should:

- A Ask parents to leave to free up the parent sleep areas for incoming victims.
- B Review the census for clients that are candidates for early discharge.
- C Initiate paper charting back-up.
- D Change taking all vital signs to every 8 hours.

CORRECT

Q-370

SnleNotes.com

Several pregnant clients are waiting to be seen in the triage area of the obstetrical unit. Which client should the nurse see first?

- A A client at 13 weeks' gestation experiencing nausea and vomiting three times a day with +1 ketones in her urine.
- B A client at 37 weeks' gestation who is an insulin-dependent diabetic and experiencing 3 to 4 fetal movements per day.
- C A client at 32 weeks' gestation who has preeclampsia and +3 proteinuria who is returning for evaluation of epigastric pain.
- D A client at 17 weeks' gestation who is not feeling fetal movement at this point in her pregnancy.

CORRECT

Q-371

SnleNotes.com

The nurse is planning care for a group of pregnant clients. Which of the following clients should be referred to a health care provider immediately?

- A A woman who is at 10 weeks' gestation, is having nausea and vomiting, and has +1 ketones in her urine.
- B A woman who is at 37 weeks' gestation and has insulin-dependent diabetes experiencing two to three hyperglycemic episodes weekly.
- C A woman at 32 weeks' gestation and is preeclamptic with +3 proteinuria.
- D A woman at 15 weeks' gestation who reports she has not felt fetal movement.

CORRECT

Q-372

SnleNotes.com

A client with pregnancy-induced hypertension is to receive magnesium sulfate to run at 3 g/h with normal saline to maintain the total IV rate at 125 mL/h. The nurse giving end of shift report stated that the client's blood pressures have been elevated during the night. The oncoming nurse checked the client and found magnesium sulfate running at 2 g/h. Identify the nursing actions to be taken from first to last.

- A Notify the primary health care provider of the incident.
- B Assess the client's current status.
- C Correct the IV rates.
- D Initiate an incident report.

CORRECT

Q-373

SnleNotes.com

The nurse is planning care for a client who had surgery for abdominal aortic aneurysm repair 2 days ago. The pain medication and the use of relaxation and imagery techniques are not relieving the client's pain and the client refuses to get out of bed to ambulate as prescribed. The nurse contacts the physician, explains the situation, and provides information about drug dose, frequency of administration, the client's vital signs, and the client's score on the pain scale. The nurse requests a prescription for a different, or stronger, pain medication. The physician tells the nurse that the current prescription for pain medication is sufficient for this client and that the client will feel better in several days. The nurse should next:

- A Explain to the physician that the current pain medication and other strategies are not helping the client and it is making it difficult for the client to ambulate as prescribed.
- B Ask the hospitalist to write a prescription for a stronger pain medication.
- C Wait until the next shift and ask the nurse on that shift to contact the physician.
- D Report the incident to the team leader.

CORRECT

Q-374

SnleNotes.com

The nurse is catheterizing a client who cannot void after a normal birth 8 hours ago. The nurse begins the catheterization process and the client asks the nurse if povidone-iodine was used to clean the meatus for the catheterization. The nurse realizes that the client is allergic to povidone-iodine and the client is reacting to the cleansing agent. The nurse should take the following steps in order of priority from first to last.

- A Document incident.
- B Clean povidone-iodine from client's vaginal area.
- C Notify physician prescribing catheterization.**
- D Ask client what her reaction is when exposed to povidone-iodine.

CORRECT

Q-375

SnleNotes.com

A nurse is walking down the hall in the main corridor of a hospital when the infant security alert system sounds and a code for an infant abduction is announced. The first responsibility of the nurse when this situation occurs is to do which of the following?

- A Move to the entrance of the hospital and check each person leaving.
- B Go to the obstetrics unit to determine if they need help with the situation.**
- C Call the nursery to ask which baby is missing.
- D Observe individuals in the area for large bags or oversized coats.

CORRECT

Q-376

SnleNotes.com

The nurse on a mother-baby unit who is working on the night shift is revising the planning worksheet for the remaining 2 hours of the shift. The nurse has the following tasks and prescriptions to complete prior to the 7 change of shift. Using the work plan below, how should the nurse organize the following tasks so that everything is completed by 7 ?

- A Draw blood for the prescribed laboratory tests (complete blood counts [CBCs]) on three postpartum clients with report on charts by shift change.**
- B Start IV of D5 ½ NS at keep vein open (KVO) rate on postpartum client just prior to change of shift.
- C Complete admission assessment of newborn turned over to nurse at 5 .
- D Draw newborn bilirubin level at 6.

CORRECT

Q-377

SnleNotes.com

A nursing assistant is providing care to a client with left-sided paralysis. Which of the following actions by the nursing assistant requires the nurse to provide further instruction?

- A Providing passive range-of-motion exercises to the left extremities during the bed bath.
- B Elevating the foot of the bed to reduce edema.
- C Pulling up the client under the left shoulder when getting the client out of bed to a chair.**
- D Putting high top tennis shoes on the client after bathing.

CORRECT

Q-378

SnleNotes.com

After receiving a change-of-shift report at 7:00, which client should the nurse assess first?

- A A 23-year-old with a migraine headache who has severe nausea associated with retching.
- B A 45-year-old who is scheduled for a craniotomy in 30 minutes and needs preoperative teaching.
- C A 59-year-old with Parkinson's disease who will need a swallowing assessment before breakfast.
- D A 63-year-old with multiple sclerosis who has an oral temperature of 101.8°F (38.8°C) and flank pain.**

CORRECT

Q-379

SnleNotes.com

The nurse has asked the nursing assistant to ambulate a client with Parkinson's disease. The nurse observes the nursing assistant pulling on the client's arms to get the client to walk forward. The nurse should:

- A Have the nursing assistant keep a steady pull on the client to promote forward ambulation.**
- B Explain how to overcome a freezing gait by telling the client to march in place.
- C Assist the nursing assistant with getting the client back in bed.
- D Give the client a muscle relaxant.

CORRECT

Q-380

SnleNotes.com

The nurse-manager on a gynecologic surgical unit is addressing reports from clients that they have to wait too long on the night shift for their pain medication. Which course of action should the nurse-manager take first?

- A Change the staffing schedule on nights to include a medication nurse.** CORRECT
- B Consult the nursing supervisor.
- C Consult the nurses on the evening shift about their evaluation of the night nurses regarding these reports from the clients.
- D Complete a quality improvement study with the night nurses to document the waiting times for pain medication and other data, including staffing and client acuity.

Q-381

SnleNotes.com

A nurse is reviewing the physician's admitting prescriptions for a 52-year-old client scheduled for a dilatation and curettage. The nurse is unable to decipher the handwriting but thinks the medication prescription reads either metoprolol or topiramate. What should the nurse do next?

- A Ask the client if she has hypertension.
- B Ask the client if she has migraines.
- C Call the physician to clarify the prescription.** CORRECT
- D Ask the pharmacist to interpret the prescription.

Q-382

SnleNotes.com

The unlicensed assistive personnel (UAP) reports to the nurse that the client with an abdominal hysterectomy who returned from the recovery room 1 hour earlier has saturated the blue pad with bright red blood. The nurse should:

- A Call the surgeon to report the bleeding.** CORRECT
- B Ask the UAP to obtain vital signs while the nurse calls the surgeon.
- C Ask the UAP to increase the flow of IV fluids to prevent shock.
- D Assess the client again in 15 minutes before the nurse takes any further action.

Q-383

SnleNotes.com

A nurse on the gynecologic surgery unit observes a respiratory therapist (RT) take a medication cup with pills that was sitting in the medication room. What course of action should the nurse take?

- A Report the situation to the supervisor of respiratory therapy.
- B Tell the RT that you saw her take the pills from the medication room.
- C Report the situation to the nursing supervisor.** CORRECT
- D Tell the nurse who was administering medications not to leave pills out.

Q-384

SnleNotes.com

The nurse unit manager is making rounds on a team of clients and notices a client who is wearing red slipper socks and a color-coded armband that indicates the client is at risk for falling walking down the hall unassisted. The nurse should do which of the following first?.

- A Encourage the client to keep walking until he becomes tired.
- B Walk with the client back to his room and assist him to get in bed.** CORRECT
- C Accompany the client while using the lapel microphone to call for the unlicensed nursing personnel (UAP) to walk with the client.
- D Instruct the client to walk only in his room.

Q-385

SnleNotes.com

The physician has prescribed 5 mg Coumadin (warfarin) orally for a hospitalized client. In planning care for this client, the nurse should verify that which of the following services have been contacted? Check all that apply.

- A Pharmacy.
- B Dietary.
- C Laboratory.** CORRECT
- D Discharge planning.

Q-386

SnleNotes.com

Which activity would be appropriate to delegate to unlicensed personnel for a client diagnosed with a myocardial infarction who is stable?

- A Evaluate the lung sounds.
- B Help the client identify risk factors for CAD.
- C Provide teaching on a 2-g sodium diet.
- D **Record the intake and output.**

CORRECT

Q-387

SnleNotes.com

The nurse is planning care for a client with severe postoperative pain. There is a prescription for morphine written as "10 mg MSO " on the chart. Which of the following should the nurse do first?

- A Obtain an intravenous infusion system.
- B Prepare the medication for administration.
- C Contact the Pharmacy Department.
- D **Contact the physician who prescribed the medication.**

CORRECT

Q-388

SnleNotes.com

The client has returned to the surgery unit from the postanesthesia care unit (PACU). The client's respirations are rapid and shallow, the pulse is 120, and the blood pressure is 88/52. The client's level of consciousness is deteriorating. The nurse should do which of the following first?

- A Call the PACU.
- B Call the primary care physician.
- C Call the respiratory therapist.
- D **Call the Rapid Response Team (RRT).**

CORRECT

Q-389

SnleNotes.com

When completing the Preoperative Checklist on the nursing unit, the nurse discovers an allergy that the client has not reported. What should the nurse do first?

- A Administer the prescribed preanesthetic medication.
- B Note this new allergy prominently at the front of the chart.
- C Contact the scrub nurse in the operating room.
- D **Inform the nurse anesthetist.**

CORRECT

Q-390

SnleNotes.com

A very elderly, drowsy client with fragile skin is being transferred from the surgery cart to the bed. How should the nurse plan to direct the transfer to prevent skin shearing?

- A With two people at each side using a drawsheet.
- B With two people, one at each side using a drawsheet, and one person at the head.
- C With two people using a roller and a drawsheet.
- D **With two people, one at each side using a drawsheet, one person at the head, and one person at the feet**

CORRECT

Q-391

SnleNotes.com

A nurse receives the taped change-of-shift report for assigned clients and prioritizes client rounds. In what order should the nurse assess these clients?

- A **A client with an endotracheal tube transferred out of the intensive care unit that day.**
- B A client with type 2 diabetes who had a cerebrovascular accident 4 days ago.
- C A client with cellulitis of the left lower extremity with a fever of 100.8°F (38.2°C).
- D A client receiving D5W IV at 125 mL/h with 75 mL remaining.

CORRECT

Q-392

SnleNotes.com

Which patient would the charge nurse assign to the step- down unit nurse who was floated to the intensive care unit for the day?

A A 68- year- old patient on a ventilator with acute re- spiratory failure and respiratory acidosis

B A 72- year- old patient with chronic obstructive pulmonary disease (COPD) and normal blood gas values who is ventilator dependent

CORRECT

C A newly admitted 56-y ear- old patient with dia- betic ketoacidosis receiving an insulin drip

D A 38- year- old patient on a ventilator with narcotic overdose and respiratory alkalosis

Q-393

SnleNotes.com

A patient is admitted to the oncology unit for chemo- therapy. To prevent an acid-b ase problem, which finding would the nurse instruct the assistive personnel to report?

A Repeated episodes of nausea and vomiting

CORRECT

B Reports of pain associated with exertion

C Failure to eat all the food on the breakfast tray

D Patient hair loss during the morning bath

Q-394

SnleNotes.com

The RN is providing care for a patient diagnosed with dehydration and hypovolemic shock. Which prescribed intervention from the health care provider should the RN question?

A Blood pressure every 15 minutes

B Place two 18- gauge IV lines.

C Oxygen at 3 L via nasal cannula

D IV 5% dextrose in water (D W) to run at 250 mL/hr

CORRECT

Q-395

SnleNotes.com

Which specific instruction does the charge nurse give the assistive personnel helping to provide care for a patient who is at risk for metabolic acidosis?

A Check to see that the client keeps his oxygen in place at all times

B Inform the nurse immediately if the client's respiratory rate and depth increases

CORRECT

C Record any episodes of reflux or constipation.

D Keep the client's ice water pitcher filled at all times

Q-396

SnleNotes.com

The nurse has received a needlestick injury after giv- ing a patient an intramuscular injection but has no information about whether the patient has human immunodeficiency virus (HIV) infection. What is the most appropriate method of obtaining this informa- tion about the patient?

A The nurse should personally ask the patient to au- thorize HIV testing.

B The charge nurse should tell the patient about the need for HIV testing.

C The occupational health nurse should discuss HIV status with the patient.

CORRECT

D HIV testing should be performed the next time blood is drawn for other tests.

Q-397

SnleNotes.com

Which medication order for a patient with a pulmo- nary embolism is most important to clarify with the prescribing health care provider before administration?

A Warfarin 1.0 mg PO

CORRECT

B Morphine 2 to 4 mg IV

C Cephalexin 250 mg PO

D Heparin infusion at 900 units/hr

Q-398

SnleNotes.com

The nurse is supervising an LPN/LVN who says, "I gave the patient with myasthenia gravis 90 mg of neo- stigmine instead of the ordered 45 mg!" In which or- der should the nurse perform the following actions?

- A Assess the patient's heart rate.** **CORRECT**
- B Complete a medication error report.
- C Ask the LPN/LVN to explain how the error occurred.
- D Notify the health care provider of the incorrect medication dose. _____, _____, _____, _____

Q-399

SnleNotes.com

The nurse is caring for a confused and agitated patient who has wrist restraints in place on both arms. Which action included in the patient plan of care can be as- signed to an LPN/LVN?

- A Determining whether the patient's mental status justifies the continued use of restraints
- B Undoing and retying the restraints to improve pa- tient comfort** **CORRECT**
- C Reporting the patient's status and continued need for restraints to the health care provider
- D Explaining the purpose of the restraints to the pa- tient's family members

Q-400

SnleNotes.com

The nurse is checking medication prescriptions that were received by telephone for a patient with hyper- tensive crisis and tachycardia. Which medication is most important to clarify with the health care pro- vider (HCP)?

- A Carvedilol 12.5 mg PO BID daily
- B Hydrochlorothiazide 25 mg PO daily
- C Labetalol 20 mg IV over a 2- min time period now
- D Hydroxyzine 50 mg PO as needed systolic blood pressure greater than 160 mm Hg** **CORRECT**

Q-401

SnleNotes.com

The nurse is admitting an 80-y ear- old female patient who has mild dementia and is incontinent. Which is the best way to assess the patient's pressure injury risk?

- A Conduct a full head to toe physical assessment.
- B Rely on empirical knowledge gained by caring for other patients with pressure ulcers.
- C Utilize the Braden Scale.** **CORRECT**
- D Consult with the wound care nurse specialist.

Q-402

SnleNotes.com

The nurse is the preceptor for an RN who is undergoing orientation to the intensive care unit. The RN is pro- viding care for a patient with acute respiratory distress syndrome who has just been intubated in preparation for mechanical ventilation. The preceptor observes the RN performing all of these actions. For which action must the preceptor intervene immediately?

- A Assesses for bilateral breath sounds and symmetri- cal chest movement
- B Uses an end- tidal carbon dioxide detector to confirm endotracheal tube (ET) position
- C Marks the tube 1 cm from where it touches the incisor tooth or nares
- D Orders chest radiography to verify that tube placement is correct** **CORRECT**

Q-403

SnleNotes.com

The nurse is assigned to provide nursing care for a pa- tient receiving mechanical ventilation. Which action should the nurse delegate to an experienced assistive personnel (AP)?

- A Assessing the patient's respiratory status every 4 hours
- B Taking vital signs and pulse oximetry readings ev- ery 4 hours** **CORRECT**
- C Checking the ventilator settings to make sure they are as prescribed
- D Observing whether the patient's tube needs suctioning every 2 hours

Q-404

SnleNotes.com

After the respiratory therapist performs suctioning on a patient who is intubated, the assistive personnel (AP) measures vital signs for the patient. Which vital sign value should the AP be instructed to report to the RN immediately?

- A Heart rate of 98 beats/min
- B Respiratory rate of 24 breaths/min
- C Blood pressure of 168/90 mm Hg
- D Tympanic temperature of 101.4°F (38.6°C)

CORRECT

Q-405

SnleNotes.com

The nurse is caring for a patient with emphysema and respiratory failure who is receiving mechanical ventilation through an endotracheal tube. To prevent ventilator-associated pneumonia (VAP), which action is most important to include in the plan of care?

- A Administer ordered antibiotics as scheduled.
- B Hyperoxygenate the patient before suctioning.
- C Maintain the head of bed at a 30- to 45- degree angle.
- D Suction the airway when coarse crackles are audible.

CORRECT

Q-406

SnleNotes.com

The critical care charge nurse is responsible for the care of four patients receiving mechanical ventilation. Which patient is most at risk for failure to wean and ventilator dependence?

- A A 68- year- old patient with a history of smoking and emphysema
- B A 57- year- old patient who experienced a cardiac arrest
- C A 49- year- old postoperative patient who had a colectomy
- D A 29- year- old patient who is recovering from flail chest

CORRECT

Q-407

SnleNotes.com

The RN in an emergency room has triaged four patients patients should be seen.

- A A 14- year- old healthy male presenting with a swollen, reports he fell off his all-terrain vehicle. Vital signs are tory rate (R) 20, oxygen saturation (O Sat) 98% room
- B A 24- year- old female with a history of mitral valve prolapse symptoms started after breakfast 2 hours ago and complains (102.2°F), P 110 regular, R 18, O Sat 93% room air, and
- C An 80- year- old female with a history of congestive heart hasn't had a bowel movement in 2 weeks and is uncomfortable. 16, O Sat 95% on room air, and BP 120/70.
- D A 54- year- old obese male with a history of diabetes presenting that he has had the flu all week. Vital signs are T 38°C BP 140/92.

CORRECT

Q-408

SnleNotes.com

A patient with graft-versus-host disease after bone marrow transplantation is being cared for on the medical unit. Which nursing activity is best assigned to a traveling RN?

- A Administering oral cyclosporine
- B Assessing the patient for signs of infection
- C Infusing 5% dextrose in 0.45% saline at 125 mL/hr
- D Educating the patient about ways to prevent infection

CORRECT

Q-409

SnleNotes.com

The nurse is caring for a patient who takes warfarin daily for a diagnosis of atrial fibrillation. Which information about the patient is most important to report to the health care provider (HCP)?

- A The international normalized ratio (INR) is 5.2.
- B Bruising is noted at sites where blood has been drawn.
- C The patient reports eating a green salad for lunch every day.
- D The patient has questions about whether a different anticoagulant can be used.

CORRECT

Q-410

SnleNotes.com

300/ μ L A patient with an absolute neutrophil count of 109/L) (0.3 $\times$ is admitted to the oncology unit. Which staff member should the charge nurse assign to provide care for this patient, under the supervision of an experienced oncology RN?

- A LPN/LVN who has floated from the same-day surgery unit
- B RN from a staffing agency who is being oriented to the oncology unit
- C LPN/LVN with 2 years of experience on the oncology unit**
- D RN who recently transferred to the oncology unit from the emergency department

CORRECT

Q-411

SnleNotes.com

The nurse is transferring a patient with newly diagnosed chronic myeloid leukemia to a long-term care facility. Which information is most important to communicate to the nurse at the long-term care facility before transferring the patient?

- A Philadelphia chromosome is present in the patient's blood smear.
- B The patient's glucose level is elevated as a result of prednisone therapy.
- C There has been a 20-lb (9.1-kg) weight loss over the last year.
- D The patient's chemotherapy has resulted in neutropenia.**

CORRECT

Q-412

SnleNotes.com

A patient with Hodgkin lymphoma who is receiving radiation therapy to the groin area has skin redness and tenderness in the area being irradiated. Which nursing activity should the nurse delegate to the assistive personnel (AP) caring for the patient?

- A Checking the skin for signs of redness or peeling
- B Assisting the patient in choosing appropriate clothing
- C Explaining good skin care to the patient and family
- D Cleaning the skin over the area daily with a mild soap**

CORRECT

Q-413

SnleNotes.com

After the nurse receives the change-of-shift report, which patient should be assessed first?

- A A 20-year-old patient with possible acute myelogenous leukemia who has just arrived on the medical unit**
- B A 38-year-old patient with aplastic anemia who needs teaching about decreasing infection risk before discharge
- C A 40-year-old patient with lymphedema who requests help in putting on compression stockings before getting out of bed
- D A 60-year-old patient with non-Hodgkin lymphoma who is refusing the prescribed chemotherapy regimen

CORRECT

Q-414

SnleNotes.com

The charge nurse is assigning the nursing care of a patient who had a left below-the-knee amputation 1 day ago to an experienced LPN/LVN, who will function under an RN's supervision. What will the RN tell the LPN/LVN is the major focus for the patient's care today?

- A To attain pain control over phantom pain
- B To monitor for signs of sufficient tissue perfusion**
- C To assist the patient to ambulate as soon as possible
- D To elevate the residual limb when the patient is supine

CORRECT

Q-415

SnleNotes.com

During morning care, a patient with a below-the-knee amputation asks the assistive personnel (AP) about prostheses. How will the nurse instruct the AP to respond?

- A "You should get a prosthesis so that you can walk again."
- B "Wait and ask your health care provider (HCP) that question the next time he comes in."
- C "It's too soon to be worrying about getting a prosthesis."
- D "I'll ask the nurse to come in and discuss this with you."**

CORRECT

Q-416

SnleNotes.com

A patient who underwent a right above- the- knee am- putation 4 days ago also has a diagnosis of depression. Which prescription would the nurse clarify with the health care provider?

- A Give fluoxetine 40 mg once a day.** CORRECT
- B Administer acetaminophen with codeine 1 or 2 tablets every 4 hours as needed.
- C Assist the patient to the bedside chair every shift.
- D Reinforce the dressing to the right residual limb as needed.

Q-417

SnleNotes.com

The emergency department (ED) nurse should ques- tion which health care provider prescription when providing care for an older adult with a fracture of the left ulna?

- A Get x- rays of the left forearm.
- B Give meperidine IM for pain.** CORRECT
- C Monitor vital signs every hour.
- D Elevate left arm on pillows.

Q-418

SnleNotes.com

The RN is mentoring a student nurse who is car- ing for a patient with carpal tunnel syndrome of the right hand with a neurovascular check ordered every 2 hours. For which action by the student nurse must the RN intervene?

- A Student nurse checks the patient's radial pulse every 2 hours.
- B Student nurse checks for sensation in the patient's right hand.
- C Student nurse assesses color, temperature, and pain in right wrist and hand.
- D Student nurse instructs the patient to avoid move- ment because of the pain.** CORRECT

Q-419

SnleNotes.com

The nurse is preparing a patient for magnetic reso- nance imaging. Which action can the nurse delegate to the experienced assistive personnel (AP)?

- A Teach the patient what to expect during the test.
- B Instruct the patient to remove metal objects including zippers.
- C Witness that the patient has signed the consent form.
- D Check and record preprocedure vital signs.** CORRECT

Q-420

SnleNotes.com

The nurse managing the admission nursery is beginning the shift. There are 2 infants under the care of a primary staff nurse and are remaining in the nursery while their mothers sleep. One new- born is waiting to be transferred to the special care nursery (SCN) with a diagnosis of possible sepsis. The SCN cannot accept a transfer for 30 minutes. The nurse has been notifi ed that another infant has been born and is breathing at a rate of 80 bpm and needs to be admitted to the nursery. There are also two infants who are waiting for social services to determine follow-up. There can be no other addi- tions to the nursery until at least one newborn leaves the area. How should the nurse manage this situation?

- A Ask the nurses in SCN if they can take the newborn with possible sepsis now.
- B Ask the primary staff nurses to take their babies back to the sleeping mothers' rooms.** CORRECT
- C Call social services to determine if either of the babies who are waiting to be discharged are ready to leave.
- D Ask the nurse with the infant who is breath- ing at 80 bpm to wait ½ hour. 88//99//22001100 44::3300::3377 PPMM

Q-421

SnleNotes.com

Thirty-two children are brought to the emergency department after a school bus accident. Two children were killed along with the three people in the car that caused the crash. Before the victims arrive, in addition to ensuring that the hospital staff are prepared for the emergency, which step should the nurse anticipate carrying out?

- A Calling the nearest crisis response team.** CORRECT
- B Alerting the news media.
- C Notifying the hospital volunteer offi ce.
- D Calling the school to inform teachers of the accident. Disasters

Q-422

SnleNotes.com

The nurse in the emergency department is administering an order for 20 mg intravenous furo- semide (Lasix) which is to be given immediately. The nurse scans the client's identi- cation band and the medication barcode. The medication administration system does not verify that furosemide is ordered for this client; however, the furosemide is prepared in the accurate unit dose for intravenous infusion. The nurse should do which of the following next?

- A** Contact the pharmacist immediately to check the order and the barcode label for accuracy. **CORRECT**
- B Administer the medication now, knowing the medication is labeled and the client is identi- fi ed.
- C Report the problem to the information tech- nology team to have the barcode system reca- librated.
- D Ask another nurse to verify the medication and the client so the medication can be given now. 88//77//22001100 1100::2299::4444 AAMM

Q-423

SnleNotes.com

A staff nurse on the mental health unit tells the nurse manager that kids with conduct disorders might as well be jailed because they all end up as adults with antisocial personality disorder anyway. What is the best reply by the nurse manager?

- A "You really sound burned out. Do you have a vacation coming up soon?"
- B "These children are more likely to have prob- lems with depression and anxiety disorder as adults."
- C "You sound really frustrated. Let's talk about the meaning of their behavior."** **CORRECT**
- D "My experience hasn't been that negative. Let's see what the other staff members think; maybe I'm wrong."

Q-424

SnleNotes.com

In the care of patients with pain and discomfort, which task is most appropriate to delegate to unli- censed assistive personnel (AP)?

- A** Assisting the patient with preparation of a sitz bath **CORRECT**
- B Monitoring the patient for signs of discomfort while ambulating
- C Coaching the patient to deep breathe during painful procedures
- D Evaluating relief after applying a cold compress

Q-425

SnleNotes.com

A patient has severe pain and bladder distention related to urinary retention and possible obstruction; insertion of an indwelling catheter is prescribed. An experienced unlicensed assistive personnel (AP) states that she is trained to do this procedure. Which task can be delegated to this AP?

- A Assessing the bladder distention and the pain associated with urinary retention
- B Inserting the indwelling catheter after verifying her knowledge of sterile technique
- C Evaluating the relief of pain and bladder distention after the catheter is inserted
- D** Measuring the urine output after the catheter is inserted and obtaining a specimen **CORRECT**

Q-426

SnleNotes.com

Which nursing action is the best example of the principle of nonmaleficence as an ethical consideration in pain management?

- A** Patient seems excessively sedated but continues to ask for morphine, so the nurse conducts further assessment and seeks alternatives to opioid medication. **CORRECT**
- B Patient has no known disease disorders and no objective signs of poor health or injury, but reports severe pain, so nurse advocates for pain medicine.
- C Patient is older, but he is mentally alert and dem- onstrates good judgment, so the nurse encourages the patient to verbalize personal goals for pain management.
- D Patient repeatedly refuses pain medication but shows grimacing and reluctance to move, so the nurse explains the benefits of taking pain medication.

Q-427

SnleNotes.com

The home health nurse discovers that an older adult patient has been sharing his pain medication with his daughter. He acknowledges the dangers of sharing, but states, "My daughter can't afford to see a doctor or buy medicine, so I must give her a few of my pain pills." Which member of the health care team would the nurse consult first?

- A Administer acetaminophen and spend extra time
- B Explain that opioid medication is reserved for
- C Give the opioid because the patient deserves relief
- D **Ask the HCP to validate suspicions of drug abuse and alter the opioid prescription.**

CORRECT

Q-428

SnleNotes.com

An inexperienced new nurse compares the medication administration record (MAR) and the health care provider's (HCP's) prescription for a patient who has a patient-controlled analgesia (PCA) pump for pain management. Both the MAR and prescription indicate that larger doses are prescribed at night compared with doses throughout the day. Who would the new nurse consult first?

- A Ask the patient if he typically needs extra medication in the evening.
- B **Ask the HCP to verify that the larger amount is the correct dose.**
- C Ask the pharmacist to confirm the dosage on the original prescription.
- D Ask the charge nurse if this is a typical dosage for nighttime PCA.

CORRECT

Q-429

SnleNotes.com

A person who is receiving chemotherapy is approach-ing the nadir period. Which instruction will the team leader give to the LPN/LVN?

- A **Monitor the neutrophil count; be vigilant for signs/ symptoms of infection.**
- B Expect nausea and vomiting; give antiemetics as prescribed.
- C Observe for breakthrough pain; report frequency of bolus doses of opioids.
- D Monitor for anorexia; initiate daily weights as needed.

CORRECT

Q-430

SnleNotes.com

After assessing the patient's pain patterns, the nurse determines that frequent breakthrough cancer pain is occurring. Which member of the health care team is the nurse most likely to contact first?

- A Physical therapist to reevaluate physical therapy routines
- B **Health care provider (HCP) to review medication, dosage, and frequency**
- C Assistive personnel to increase help with activities of daily living
- D Psychiatric clinical nurse specialist to evaluate psychogenic pain

CORRECT

Q-431

SnleNotes.com

Which patient with a health problem related to gas-trointestinal (GI) cancer would be the most appropri-ate to assign to an LPN/LVN under the supervision of a team leader RN?

- A A patient who needs a blood transfusion secondary to GI bleeding
- B **A patient who needs enemas and antibiotics to control GI bacteria**
- C A patient who needs preoperative teaching for bowel resection surgery
- D A patient who needs central line insertion for chemotherapy

CORRECT

Q-432

SnleNotes.com

For a patient who is experiencing side effects of radiation therapy, which task would be the most appropri-ate to delegate to assistive personnel (AP)?

- A Helping the patient to cope with fatigue and lack of energy
- B Encouraging participation in a walking program
- C **Reporting the amount and type of food consumed from the tray**
- D Checking the skin for redness and irritation after the treatment

CORRECT

Q-433

SnleNotes.com

When staff assignments are made for the care of patients who are receiving chemotherapy, which consideration related to chemotherapeutic drugs is the most important?

- A Administration of chemotherapy requires precautions to protect self and others.**
- B Many chemotherapeutic drugs are vesicants.
- C Chemotherapeutic drugs are frequently given through central venous access devices.
- D Oral and intravenous routes of administration are the most common.

CORRECT

Q-434

SnleNotes.com

A primary nursing responsibility is the prevention of lung cancer by assisting patients in the cessation of smoking or other tobacco use. Which task would be appropriate to assign to an LPN/LVN?

- A Develop a "quit plan"
- B Explain how to apply a nicotine patch**
- C Discuss strategies to avoid relapse
- D Suggest ways to deal with urges for tobacco

CORRECT

Q-435

SnleNotes.com

The nurse manager in a public health department is implementing a plan to reduce the incidence of infection with human immunodeficiency virus (HIV) in the community. Which nursing action will be delegated to assistive personnel (AP) working for the agency?

- A Supplying injection drug users with sterile injection equipment such as needles and syringes
- B Interviewing patients about behaviors that indicate a need for annual HIV testing
- C Teaching high-risk community members about the use of condoms in preventing HIV infection
- D Assessing the community to determine which population groups to target for education**

CORRECT

Q-436

SnleNotes.com

The nurse is working in a hospice facility for patients with acquired immunodeficiency syndrome. The facility is staffed with LPNs/LVNs and assistive personnel (AP). Which action will the nurse assign to the LPN/LVN?

- A Assessing patients' nutritional needs and individualizing diet plans to improve nutrition
- B Collecting data about the patients' responses to medications used for pain and anorexia
- C Developing AP training programs about how to lower the risk for spreading infections
- D Assisting patients with personal hygiene and other activities of daily living as needed**

CORRECT

Q-437

SnleNotes.com

A patient who has received a kidney transplant has been admitted to the medical unit with acute rejection and is receiving IV cyclosporine and methylprednisolone. Which staff member is best to assign to care for this patient?

- A RN who floated to the medical unit from the coronary care unit for the day
- B RN with 3 years of experience in the operating room who is orienting to the medical unit
- C RN who has worked on the medical unit for 5 years and is working a double shift today**
- D Newly graduated RN who needs experience with IV medication administration

CORRECT

Q-438

SnleNotes.com

During pre-employment screening, an occupational health nurse reviews the health history of a newly hired nurse. Which finding requires the nurse to take additional action before the employee begins providing direct patient care?

- A The employee takes enalapril for hypertension
- B The employee reports allergies to bananas, avocados, and papayas**
- C The employee received a tetanus vaccination 3 years ago.
- D The employee's tuberculin skin test has a 5-mm induration at 48 hours.

CORRECT

Q-439

SnleNotes.com

A patient with a vancomycin-resistant enterococcus (VRE) infection is admitted to the medical unit. Which action can be delegated to the assistive personnel who is assisting with the patient's care?

- A Teaching the patient and family members about ways to prevent transmission of VRE
- B Communicating with other departments when the patient is transported for ordered tests
- C **Implementing contact precautions when providing care for the patient**
- D Monitoring the results of ordered laboratory culture and sensitivity tests

CORRECT

Q-440

SnleNotes.com

Which infection control activity should the charge nurse delegate to an experienced assistive personnel (AP)?

- A Screening patients for upper respiratory tract symptoms
- B Asking patients about the use of immunosuppressant medications
- C Demonstrating correct hand washing to the patients' visitors
- D **Disinfecting blood pressure cuffs after patients are discharged**

CORRECT

Q-441

SnleNotes.com

Which policy implemented by the infection control nurse will most effectively reduce the incidence of catheter-associated urinary tract infections (CAUTIs)?

- A **Limit the use of indwelling urinary catheters in all hospitalized patients.**
- B Ensure that patients with catheters have at least a 1500-mL fluid intake daily.
- C Use urine dipstick testing to screen catheterized patients for asymptomatic bacteria.
- D Require the use of antimicrobial/antiseptic-impregnated catheters for catheterization.

CORRECT

Q-442

SnleNotes.com

A patient with a diagnosis of sleep apnea has a problem with sleep deprivation related to a disrupted sleep cycle. Which action should the nurse delegate to the assistive personnel (AP)?

- A Discussing weight-loss strategies such as diet and exercise with the patient
- B Teaching the patient how to set up the bilevel positive airway pressure machine before sleeping
- C **Reminding the patient to sleep on his side instead of his back**
- D Administering modafinil to promote daytime wakefulness

CORRECT

Q-443

SnleNotes.com

A patient has chronic obstructive pulmonary disease. Which intervention for airway management should the nurse delegate to the assistive personnel (AP)?

- A **Assisting the patient to sit up on the side of the bed**
- B Instructing the patient to cough effectively
- C Teaching the patient to use incentive spirometry
- D Auscultating breath sounds every 4 hours

CORRECT

Q-444

SnleNotes.com

The nurse is responsible for the care of a postoperative patient with a thoracotomy. Which action should the nurse delegate to the assistive personnel (AP)?

- A Instructing the patient to alternate rest and activity periods
- B **Encouraging, monitoring, and recording nutritional intake**
- C Monitoring cardiorespiratory response to activity
- D Planning activities for periods when the patient has the most energy

CORRECT

Q-445

SnleNotes.com

The nurse is initiating a nursing care plan for a patient with pneumonia. Which intervention for cough enhancement should the nurse delegate to the assistive personnel (AP)?

- A Teaching the patient about the importance of adequate fluid intake and hydration
- B Assisting the patient to a sitting position with neck flexed, shoulders relaxed, and knees flexed**
- C Reminding the patient to use an incentive spirometer every 1 to 2 hours while awake
- D Encouraging the patient to take a deep breath, hold it for 2 seconds, and then cough two or three times in succession

CORRECT

Q-446

SnleNotes.com

Which intervention for a patient with a pulmonary embolus would the RN assign to the LPN/LVN on the patient care team?

- A Evaluating the patient's reports of chest pain
- B Monitoring laboratory values for changes in oxygenation**
- C Assessing for symptoms of respiratory failure
- D Auscultating the lungs for crackles

CORRECT

Q-447

SnleNotes.com

The nurse is working in an outpatient clinic where many vascular diagnostic tests are performed. Which task associated with vascular testing is most appropriate to delegate to experienced assistive personnel (AP)?

- A Measuring ankle and brachial pressures in a patient for whom the ankle-brachial index is to be calculated
- B Checking blood pressure and pulse every 10 minutes in a patient who is undergoing exercise testing**
- C Obtaining information about allergies from a patient who is scheduled for left leg contrast venography
- D Providing brief patient teaching for a patient who will undergo a right subclavian vein Doppler study

CORRECT

Q-448

SnleNotes.com

The nurse is participating as a team member in the resuscitation of a patient who has experienced a cardiac arrest. The health care provider who is directing the resuscitation asks the nurse to administer epinephrine 1 mg IV. After giving the medication, which action should the nurse take next?

- A Prepare to defibrillate the patient.
- B Offer to take over chest compressions.
- C State: "Epinephrine 1 mg IV has been given."**
- D Continue to monitor the patient's responsiveness.

CORRECT

Q-449

SnleNotes.com

A resident in a long-term care facility who has venous stasis ulcers is treated with an Unna boot. Which nursing activity included in the resident's care is best for the nurse to delegate to the assistive personnel (AP)?

- A Teaching family members the signs of infection
- B Monitoring capillary perfusion once every 8 hours
- C Evaluating foot sensation and movement each shift
- D Assisting the patient in cleaning around the Unna boot**

CORRECT

Q-450

SnleNotes.com

When administering a blood transfusion to a patient, which action can the nurse delegate to the assistive personnel (AP)?

- A Take the patient's vital signs before the transfusion is started**
- B Ensure that the blood is infused within no more than 4 hours.
- C Ask the patient at frequent intervals about the presence of chills or dyspnea.
- D Assist with double-checking the patient's identification and blood bag number.

CORRECT

Q-451

SnleNotes.com

These activities are included in the care plan for a 78-year-old patient admitted to the hospital with anemia caused by possible gastrointestinal bleeding. Which activity can the nurse delegate to an experienced assistive personnel (AP)?

- A** Obtaining stool specimens for the fecal occult blood test (FOBT) **CORRECT**
- B Having the patient sign a colonoscopy consent form
- C Giving the prescribed polyethylene glycol electro-lyte solution
- D Checking for allergies to contrast dye or shellfish

Q-452

SnleNotes.com

A patient in a long-term care facility who has anemia reports chronic fatigue and dizziness with minimal activity. Which nursing activity will the nurse delegate to the assistive personnel (AP)?

- A Evaluating the patient's response to normal activities of daily living
- B** Obtaining the patient's blood pressure and pulse with position changes **CORRECT**
- C Determining which self-care activities the patient can do independently
- D Assisting the patient in choosing a diet that will improve strength

Q-453

SnleNotes.com

A group of patients is assigned to an RN-L PN/LVN team. The LPN/LVN should be assigned to provide patient care and administer medications to which patient?

- A** A 36-year-old patient with chronic kidney failure who will need a subcutaneous injection of epoetin alfa **CORRECT**
- B A 39-year-old patient with hemophilia B who has been admitted to receive a blood transfusion
- C A 50-year-old patient with newly diagnosed polycythemia vera who will require a phlebotomy
- D A 55-year-old patient with a history of stem cell transplantation who has a bone marrow aspiration scheduled

Q-454

SnleNotes.com

After a patient has a seizure, which action can the nurse delegate to the assistive personnel (AP)?

- A Documenting the seizure
- B Performing neurologic checks
- C** Checking the patient's vital signs **CORRECT**
- D Restraining the patient for protection

Q-455

SnleNotes.com

The nurse is in charge of developing a standard plan of care for an Alzheimer disease care facility and is responsible for assigning and supervising resident care given by LPNs/LVNs and delegating and supervising care given by assistive personnel (AP). Which activity is best to assign to the LPN/LVN team leaders?

- A Checking for improvement in resident memory after medication therapy is initiated
- B Using the Mini-Mental State Examination to assess residents every 6 months
- C** Assisting residents in using the toilet every 2 hours to decrease risk for urinary incontinence **CORRECT**
- D Developing individualized activity plans after consulting with residents and family

Q-456

SnleNotes.com

A patient with Guillain-Barré syndrome is to undergo plasmapheresis to remove circulating antibodies thought to be responsible for the disease. Which patient care action should the nurse delegate to the experienced assistive personnel (AP)?

- A Observe the access site for ecchymosis or bleeding.
- B Instruct the patient that there will be three or four treatments.
- C** Weigh the patient before and after the procedure. **CORRECT**
- D Assess the access site for bruit and thrill every 2 to 4 hours.
